Professional Summary

Android Engineer with 4+ years of experience at Bank Mandiri, specializing in mobile banking and Point Of Sales (POS) applications with millions of users. Proven track record in production support, incident resolution, feature development, and platform migration. Experienced in cross-functional collaboration, platform modernization, and delivering high-availability financial technology solutions.

Work Experience

Android Engineer, Livin' Merchant by Mandiri (POS App) · December 2024 – Present

PT Bank Mandiri (Persero) Tbk. — Jakarta, Indonesia

- **Data Usage Optimization — QRIS Static Notification**
Identified and resolved a high data usage production issue in Livin' Merchant app, where each incoming QRIS Static transaction notification triggered 10 concurrent API calls — causing merchants with multiple outlets to consume up to 27 GB/month. Conducted a full impact analysis and reduced redundant API calls from 10 to 2 per FCM notification, achieving ~92% reduction in data consumption per transaction (from ~0.32 MB to ~0.025 MB), validated through internal device testing.
- **Login & Home Dashboard Optimization and API Consolidation**
Analyzed and optimized the login and home dashboard initialization flow in Livin' Merchant, which suffered from high loading times due to excessive sequential API calls. Identified 9 redundant endpoints during the store data import phase and collaborated with the backend team to consolidate them into 2 new unified endpoints, reducing API calls by ~78% and significantly improving app startup latency.
- **Production Support Team**
Served as part of the production support operations for Livin' Merchant Android app — monitoring application performance, tracing and triaging production incidents, and coordinating with cross-functional teams to ensure high availability and smooth operation for merchant users.

Android Engineer, Livin' by Mandiri (Mobile Banking App) · February 2022 – December 2024

PT Bank Mandiri (Persero) Tbk. — Jakarta, Indonesia

- Delivered end-to-end QRIS feature development across three initiatives: NFC-based contactless payments for high-throughput transit and retail environments, real-time cross-border G-to-G transactions with automatic currency conversion, and dynamic payment source selection (CASA, Credit Card, Paylater) at checkout.

Education

Bachelor of Informatics — GPA 3.74 / 4.00 · Graduated August 2020

Telkom University, School of Computing — Bandung, Indonesia

Skills

Programming Languages:	Kotlin, Java, C#, Python
